Senior Software Engineer / R&D Team Lead

CLOUWAY LTD

Feb 2011 - Feb 2020

As a Senior Software Engineer / R&D Team Lead at Clouway Ltd, I assumed a multifaceted role with a focus on driving innovation, ensuring software excellence, and leading cross-functional teams to deliver impactful solutions. My responsibilities included:

- Led a dynamic team of 5-9 software engineers, fostering a culture of innovation and technical excellence. Provided mentorship, guidance, and technical expertise to team members, enabling them to excel in their roles.
- Collaborated closely with Product Managers to comprehend use cases and user stories, playing a pivotal role in shaping the architectural design of products eco system to be developed.
- Worked closely with senior leadership to align technical strategies with the company's long-term goals. Contributed to the development of the technology roadmap and ensured that technical decisions supported the organization's vision.
- Create, implement and maintain a continuous improvement plan
- Understanding the use cases (and/or user stories) in order to oversee the design of the architecture for the products to be built
- Ensure that the skills and experience of Software Development and IT teams are consistent with its scientific, technological and business needs for providing quality in present and future services
- Continuously sought opportunities to optimize processes, reduce technical debt, and enhance system performance.
- Resolved complex technical challenges and critical issues that arose during product/eco system development. Leveraged analytical skills and deep technical knowledge to identify and implement solutions.
- Spearheaded research initiatives, staying at the forefront of emerging technologies and industry trends. Implemented cutting-edge solutions to solve complex technical challenges, driving innovation within the organization.

Some of the main tools and technologies that were used:

- Java, Kotlin
- Microservice, Oauth2, CQRS, Agile
- Gradle, Google Cloud Platform(Google BigQuery, Cloud Pub/Subs, etc.)
- ReactJS, Angular 1.5
- Spark Java

Software Engineer (Full Stack)

CLOUWAY LTD

Feb 2009 - Feb 2011

As a software engineer, my main responsibility was to develop and maintain high scalable servers of the company projects. One of them was TelcoNg BSS project, which provides quality service for thousands of subscribers. The project was one of the first enterprise project that uses the Google App Engine and the earliest version of the Google Cloud Services. The frontend of the project was built with GWT.

Some of the main tools that were used:

- Java, Maven, Google app engine, GWT, Sitebricks,
- Scrum, TDD, Design Patterns
- Rest Api, Google Cloud Datastore
- Postgree SQL, Apache Tomcat, Jetty, HTML & CSS, Javascript

PROJECTS

TARYA Fintech Loan Management Solution - Software solution (end-to-end lending platform), designed to automate and improve the entire loan lifecycle.

TARYA P2P - Tarya is a solid investment platform that yields over time consistent positive returns to its investors.
