Bulgarian (Native)

As a software engineer, my main responsibility was to develop and maintain high scalable servers of the company projects. One of them was TelcoNg BSS project, which provides quality service for thousands of subscribers. The project was one of the first enterprise project that uses the Google App Engine and the earliest version of the Google Cloud Services. The frontend of the project was built with GWT.

Some of the main tools that were used:

- Java, Maven, Google app engine, GWT, Sitebricks,
- Scrum, TDD, Design Patterns
- Rest Api, Google Cloud Datastore
- Postgree SQL, Apache Tomcat, Jetty, HTML & CSS, Javascript

PROJECTS

TARYA Fintech P2P Solution - An independent platform which offers alternative investment and credit solutions.

Politis - Cloud based, mobile and web sales platform.

TelcoNG BSS - Cloud based, end-to-end Bussiness support software solution. CRM, billing and self-service domains

TelcoNG WSS - Cloud based, workforce management software solution.

TelcoNG Accounts - Authentication & authorization, Oauth2 based platform

SKILLS & PROFICIENCY
